Satisfaction

It is the aim and purpose of this store to give you a heaping dollar's worth of value for every dollar you spend here. No matter what you purchase, we want you to know that you can depend on it in every way. Only such merchandise as will satisfy you completely will be sold in this store.

Your telephone brings our store directly to your home.

Phone. Your order will receive as careful attention as though you came in person.

There's more to good service than "selling." Everything sold here must either make a new friend or strengthen an old friendship.

Wolf's Quality Store

The Store that knows what you want and has it.

Visitors treated as guests always.

SHELBY COUNTY

SOME FACTS AND FIGURES

SHELBY COUNTY, with a total of 2,702 farms in [illegible] square miles, is distinctly a farm county. More [illegible] of the entire area of the county is in its farms, and [illegible] per cent. is under cultivation. The farms are [illegible] than average size, less than 5 per cent. being under ten acres [illegible] almost, without exception, profitable and correspondingly [illegible] farmers, as a class, are the most prosperous folks in the county [illegible] of the number of farmers, that is in itself a statement [illegible] this section.

The farm population of Shelby County is almost [illegible] born white. There are but few foreign, and only five negro families [illegible] entire county, according to the most recent United States [illegible] statistics.

It is interesting to note the number of farms in the county [illegible] their owners. Of this class there are 1,673, or nearly 62 per [illegible] hundred and fifty-two, or 56 per cent. of them, are reported free [illegible] gage debt. This is an exceptionally large percentage [illegible]

the remarkably low mortgage indebtedness of only 22 per cent. of the entire valuation is carried. Even in the absence of other statistical figures, these mortgage statements alone would indicate exceptional prosperity among Shelby County farmers.

The largest single crop, and the one produced most generally throughout the entire county, is corn, of which 4,092,210 bushels were produced in 1910, a notably bad crop year, but the latest for which authoritative figures are available. Following closely on this for quantity is wheat, with a total of 755,387 bushels; oats comes next, with 106,075 bushels; potatoes fourth, with 65,824 bushels. The combined total value of these four crops was in excess of two and one-half million dollars.

Everywhere is an atmosphere of hard work. Everyone takes work seriously and as a matter of course. There is no false pride about it, and no failure to realize its importance and its necessity. Rich farmers' wives and sons and daughters take pride in their fine butter, their eggs, their vegetables, their chickens and their stock. The relations between the people of the farms and the people of the county seat are most cordial. The farmers deposit their savings in the local banks, and deal in the local stores.

This directory is published in the belief that it will serve to acquaint the residents of one end of the county with those of the other. We believe it to be accurate. We realize, however, that even in the most carefully compiled and printed books certain errors are bound to appear, and we apologize in advance for any such that may be found by our subscribers.

SPRAYING FORMULAS

FUNGICIDES—Bordeaux mixture is made by taking three pounds of sulphate of copper, four pounds of quicklime, fifty gallons of water To dissolve the copper sulphate, put it into a coarse cloth bag and suspend the bag in a receptacle partly filled with water Next, slake the lime in a tub, and strain the milk of lime thus obtained into another receptacle Now get some one to help you, and with buckets, *simultaneously* pour the two liquids into the spraying barrel or tank. Lastly, add sufficient water to make fifty gallons It is safe to use this full-strength Bordeaux on almost all foliage—except, perhaps, on extra tender things, such as watermelon vines, peach trees, etc. For these it is wiser to use a half-strength mixture

FORMALIN—This is also called formaldehyde, and may be purchased at drug stores Its principal use is to treat seed potatoes to prevent "scab" Soak the whole seed for two hours in a mixture of one-half pint formalin and fifteen gallons of cold water, dry the seed, cut, and plant in ground that has not recently grown potatoes

BORDEAUX COMBINED WITH INSECT POISON—By adding one-quarter pound of Paris green to each fifty gallons of Bordeaux, the mixture becomes a combined fungicide and insecticide Or, instead of Paris green, add about two pounds of arsenate of lead. The advantages of arsenate of lead over Paris green are, first, it is not apt to burn foliage even if used in rather excessive quantities, and, second, it "sticks" to the foliage, etc., better and longer.

INSECTICIDES—ARSENATE OF LEAD—This is the best insecticide for chewing insects, and is for sale by seedsmen Use about two pounds in fifty gallons of water

WHITE HELLEBORE—This, if fresh, may be used instead of Paris green in some cases—worms on currant and gooseberry bushes, for instance. (It is not such a powerful poison as the arsenites, and would not do so well for tough insects such as potato-bugs) Steep two ounces in one gallon of hot water, and use as a spray.

FOR SUCKING INSECTS—Now we come to another class of insecticides, suited to insects which suck a plant's juice but do not chew Arsenic will not kill such pests, therefore we must resort to solutions which kill by *contact*

KEROSENE EMULSION—One-half pound of hard or one quart of soft soap; kerosene, two gallons, boiling soft water, one gallon. If hard soap is used, slice it fine and dissolve it in water by boiling; add the boiling solution (away from the fire) to the kerosene, and stir or violently churn for from five to eight minutes, until the mixture assumes a creamy consistency. If a spray pump is at hand, pump the mixture back upon itself with considerable force for about five minutes Keep this as a stock *It must be further diluted with water before using.* One part of emulsion to fifteen parts of water, is about right for lice

CARBOLIC ACID EMULSION—Made by dissolving one pound of hard soap or one quart of soft soap in a gallon of boiling water, to which one pint of *crude* carbolic acid is added, the whole being stirred into an emulsion One part of this is added to about thirty-five parts of water and poured around the bases of the plants, about four ounces per plant at each application, beginning when the plants are set out and repeated every week or ten days until the last of May Used to fight maggots.

WHALE-OIL SOAP SOLUTION—Dissolve one pound of whale-oil soap in a gallon

of hot water, and dilute with about six gallons of cold water This is a good application for aphis (lice) on trees or plants. For oyster-shell or scurvy scale use this spray in May or June or when the tiny scale lice are moving about on the bark

Tobacco Tea—Place five pounds of tobacco stems in a water-tight vessel, and cover them with three gallons of hot water Allow to stand several hours, dilute the liquor by adding about seven gallons of water Strain and apply. Good for lice

Lime-Sulphur Mixture—Slake twenty-two pounds of fresh lump lime in the vessel in which the mixture is to be boiled, using only enough water to cover the lime Add seventeen pounds of sulphur (flowers or powdered), having previously mixed it in a paste with water Then boil the mixture for about an hour in about ten gallons of water, using an iron but not a copper vessel Next add enough more water to make, in all, fifty gallons Strain through wire sieve or netting, and apply while mixture is still warm A good, high-pressure pump is essential to satisfactory work Coat every particle of the tree. This is the standard San Jose scale remedy, although some orchardists prefer to use the soluble oil sprays now on the market

Pyrethrum, or Persian Insect Powder—It may be dusted on with a powder bellows when the plants are wet, or one ounce of it may be steeped in one gallon of hot water, and sprayed on the plants at any time It is often used on flowers, in greenhouses, on vegetables, etc

Bisulphide of Carbon—This is used to kill weevils in beans and peas, etc It comes in liquid form and may be had of druggists When exposed to the air it quickly vaporizes into a poisonous and explosive gas which is heavier than air and which will destroy all insect life (Caution—Do not inhale the vapor, and allow no lights near)

Tobacco stems, tobacco dust, kainit, soot, freshly-slaked lime, dust, etc, are often used as insect *preventives*—in the soil around plants to keep away grubs, worms and maggots, or dusted on to discourage the visits of cucumber bug etc (Note—The first four are excellent fertilizers as well as insect preventives)

Crows and blackbirds frequently pull up planted corn The best preventive is to tar the seed, as follows. Put the seed into a pail and pour on enough warm water to cover it Add a teaspoonful of coal-tar to a peck, and stir well Throw the seed out on a sieve or in a basket to drain, and then stir in a few handfuls of land plaster (gypsum), or air-slaked lime

A New Fungicide—Some orchardists are now using the following self-boiled lime-sulphur spray, instead of Bordeaux, claiming that it is less liable to spot or burn fruit and foliage Put eight pounds of unslaked lump lime in a barrel, add enough water to cover When the lime begins to heat, throw in eight pounds of flowers of sulphur Constantly stir and gradually pour on more water until the lime is all slaked, then add the rest of the water to cool the mixture About fifty gallons of water, in all, are required Strain Two pounds of arsenate of lead may be added, if desired, to the finished mixture, which then becomes a combined fungicide *and* insecticide, and may be used in the same manner as advised for Bordeaux-arsenate of lead (Special note—The self-boiled mixture is *not* the same as the lime-sulphur advised for San Jose scale, which is too strong for trees in foliage)

If you do not care to bother with making spraying mixtures at home, they can be purchased, already prepared, of seedsmen For only a few trees or plants, the extra cost of these factory mixtures is not great.

SPRAYING CALENDAR

Plant	First Application	Second Application
APPLE ... ... (*Scab, rot, rust, codling moth, bud moth, tent caterpillar, canker worm, curculio, etc*)	When buds are swelling, but before they open, Bordeaux.	If canker worms are abundant just before blossoms open, Bordeaux-arsenical mixture
ASPARAGUS (*Rust, beetles*)	Cut off all shoots below surface regularly until about July 1st	After cutting ceases, let the shoots grow and spray them with Bordeaux arsenical mixture
BEAN (*Anthracnose, leaf blight, weevil, etc*)	Treat the seed before planting with bisulphide of carbon (See remarks) When third leaf expands, Bordeaux	10 days later Bordeaux
CABBAGE (*Worms, lice, maggots, etc*)	Pyrethrum or insect powder	7 10 days later, repeat
CELERY (*Blight, rot, leaf spot, rust, caterpillars*)	Half strength Bordeaux on young plants in hotbed or seedbed	Bordeaux, after plants are transplanted to field (Pyrethrum for caterpillars if necessary)
CHERRY (*Rot, aphis slug curculio, black knot, leaf blight, or spot, etc*)	As buds are breaking, Bordeaux, when aphis appear, tobacco solution or kerosene emulsion	When blossoms drop, Bordeaux arsenical mixture
CURRANT GOOSEBERRY (*Worms, leaf blight*)	At first appearance of worms, hellebore	10 days later, hellebore Bordeaux if leaf blight is feared
GRAPE (*Fungous diseases, Rose bugs, lice, flea, beetle, leaf hopper, etc*)	In spring, when buds swell, Bordeaux	Just before flowers unfold, Bordeaux arsenical mixture
MELONS CUCUMBERS (*Mildew, rot, blight, striped bugs, lice, flea beetle, etc*)	Bordeaux, when vines begin to run	10 14 days repeat (Note Always use half strength Bordeaux on watermelon vines)
PEACH (*Rot, mildew, leaf curl, curculio, etc*)	As the buds swell, Bordeaux	When fruit has set, repeat Jar trees for curculio
PEAR AND QUINCE (*Leaf blight, scab psylla, codling moth, blister mite, slugs, etc*)	As buds are swelling, Bordeaux	Just before blossoms open Bordeaux Kerosene emulsion when leaves open for psylla, if needed
PLUM (*Curculio, black knot, leaf blight, brown rot, etc*)	When buds are swelling, Bordeaux	When blossoms have fallen, Bordeaux arsenical mixture Begin to jar trees for curculio
POTATO (*Flea beetle, Colorado beetle, blight rot, etc*)	Spray with Paris green and Bordeaux when about 4 in high	Repeat before insects become numerous
TOMATO (*Rot, blight, etc*)	When plants are 6 in high, Bordeaux	Repeat in 10 14 days. (Fruit can be wiped if disfigured by Bordeaux)

Note—For San Jose scale on trees and shrubs spray with the lime sulphur mixture in autumn after leaves fall, or (preferably) in early spring, before buds start. The lime sulphur

SPRAYING CALENDAR

Third Application	Fourth Application	Remarks
When blossoms have fallen Bordeaux arsenical mixture	8 12 days later, Bordeaux - arsenical mixture	For aphis (lice) use one of the lice remedies mentioned elsewhere. Dig out borers from tree trunks with knife and wire. For oyster shell scale, use white oil soap spray in June
2 3 weeks later, Bordeaux arsenical mixture	Repeat in 2 3 weeks	Mow vines close to ground when they are killed by frost, burn them, and apply a mulch of stable manure
14 days later, Bordeaux	14 days later, Bordeaux.	For weevils. Put seed in tight box put a cloth over seed pour bisulphide of carbon on it, put lid on and keep closed for 48 hours. Use 1 oz. to 4 lbs. of seed
7 10 days later, repeat	Repeat every 10 14 days until crop is gathered	Root maggots. Pour carbolic acid emulsion around stem of plants. Club root. Rotate crops, apply lime to soil burn refuse, treat seed with formalin before planting
14 days later, repeat	14 days later, repeat	Rot or rust is often caused by hilling up with earth in hot weather. Use boards for summer crop. Pithy stalks are due to poor seed, or lack of moisture
10 14 days, Bordeaux	Hellebore, if a second brood of slugs appear	Black knot. Dark fungous looking bunches or knots on limbs. Cut off and burn whenever seen
10 14 days, repeat, if necessary	2 to 4 weeks later, repeat	Cane borers may be kept in check by cutting out and burning infested canes
When fruit has set, Bordeaux - arsenical mixture	2 to 4 weeks later, Bordeaux	For lice use any of the lice remedies. For rose bugs use 10 pounds of arsenate of lead and one gallon of molasses in 50 gallons of water, as a spray. Or knock the bugs into pans of kerosene every day
10 14 days, repeat	10 14 days, repeat	Use lice remedies for lice. For striped bugs protect young plants with a cover of mosquito netting over each hill. Or keep vines well dusted with a mixture of air slaked lime to bacco dust and a little Paris green
When fruit is one-half grown, Bordeaux	Note.—It is safer always to use half strength Bordeaux on peach foliage	Dig out borers. Cut down and burn trees affected with "yellows"
After blossoms have fallen Bordeaux-arsenical mixture	8 12 days later, repeat.	Look out for "fire blight." Cut out and burn blighted branches whenever seen
10 14 days later, repeat	10 20 days later, Bordeaux	Cut out black knot whenever seen
Repeat for blight, rot and insects	Repeat	To prevent scabby tubers treat the seed with formalin before planting
Repeat in 10 14 days		Hand pick tomato worms

mixture is a fungicide as well as a scale cure, and if it is used the *first* early Bordeaux spray may be omitted

Cow Ailments and How to Treat Them

(From the Biggle Cow Book)

Let sick or maimed animals lie still Do not torture them by trying to get them up Rub their limbs every day and keep a soft bed under them They will get up when they are able

If a cow look poor and weak, put a blanket on her, keep her in a warm place, and feed her some corn meal and middlings, and some oats Give her warm drink, and stir a little cheap flour in it Do not let her run clear down Look ahead

If cows are accidentally left out in a rain and seem cold, put them in the stable as soon as possible and rub them well If they shiver, put blankets on them until they are dry If there is inflammation or hardness in the udder, bathe it thoroughly for at least half an hour, and rub gently until thoroughly dry

If this does not effect a cure put a *warm* flaxseed poultice on the udder, which can be held in place by means of an eight-tailed bandage This should be changed twice a day until the hardness and soreness are gone Of course, the cow should be milked out two or three times each day

If a cow get a foreign body in the mouth turn her head towards the light and remove it

When chaff or other dirt gets into the eye syringe or sponge the eye frequently with clean cold water containing sulphate of zinc one grain to each ounce of water Keep stable darkened

For CHOKING, examine throat and neck, if offending object is felt, attempt to force upward into the mouth by pressure of hands below the object Give one pint linseed oil or melted lard May sometimes reach with hand by holding tongue aside Do not push a stiff stick or fork handle down the throat, a piece of rubber hose, well greased, is less likely to ruin the cow

If a cow has BLOAT or HOVEN there will be a drum-like swelling on left side in front of hip caused by green food, wet or frosted clover, overfeeding, choking Give one-half teacupful table salt in water as drench Exercise If not relieved give aromatic spirits of ammonia, two ounces, well diluted, every hour

Where there is great danger of suffocation a puncture of the paunch may be made with a knife at a point, equally distant from the point of hip and last rib, on *left side of cow*

IMPACTION OF PAUNCH is caused by overeating, and the symptoms are failing appetite, solid or doughy swelling on front of left hip Give one to two pounds Glauber salts dissolved in water, follow every three hours by drench of mixture of equal parts common salt, nux vomica powdered and capsicum Dose, one tablespoonful

In COLIC the symptoms are uneasiness, striking belly with hind legs, lying down and getting up Cause, change of diet rapid feeding Give Glauber salts, one pound in water, warm water enemas Give every hour one ounce each of laudanum and sulphuric ether, diluted

CONSTIPATION caused by dry, coarser food and lack of exercise, is treated with green food, linseed meal and exercise, give pint of raw linseed oil DIARRHŒA is treated with starch gruel or flour and water and dry food

SCOURS in calves is caused by overfeeding, bad food or drink, damp stables, dirty surroundings Remove cause and withhold food the best remedy Give once daily twenty grains potassium permanganate in teacup of water, also use same for enema

Cows are subject to FOUNDER, showing sudden tenderness in two or more feet, feet hot and may crack around top of hoof This comes from overfeeding Give Glauber salts one pound, twenty drops tincture aconite every two hours Keep feet moist by wet pasture or wet cloths

GARGET or SWOLLEN UDDER, due to cold, injuries, overfeeding or heating food Bathe frequently with warm water, dry, and apply warm lard Milk often Give internally two-drachm doses salicylic acid and one drachm soda bicarbonate in one pint of milk four times daily

DISCHARGE OF MUCUS from nostrils indicates catarrh from exposure, dust, or pollen of plants Allow animal to breathe steam from water containing pine tar.

In SORE THROAT there is difficulty in swallowing, food returns through nostrils Steam as in catarrh give tincture belladonna one-half ounce every six hours Rub throat with equal parts turpentine and sweet oil

In BRONCHITIS there is dry cough first,

then loose, and discharge from nostrils, rattling sound in windpipe. Steam as in sore throat and give tincture aconite twenty drops every two hours and two drachms muriate ammonia in one pint of water three times daily For bronchitis in young stock due to worms in windpipe, which sometimes occur in autumn where they are pastured late, give one ounce turpentine and six ounces sweet oil well mixed three times a week Take from pasture and feed liberally.

In PNEUMONIA there is loss of appetite, animal standing, rapid breathing, pulse frequent, extremities cold Cause, exposure or neglected bronchitis Place in a warm, dry, well-ventilated stable, apply to chest equal parts turpentine and alcohol and cover with blanket In beginning give tincture aconite twenty drops every hour If not better in two days discontinue aconite and give one ounce tr digitalis every eight hours

In PLEURISY there is fever with rapid pulse, animal stands, grunts on moving or when chest is struck, has a short painful cough Treat same as for pneumonia, give also one drachm iodide of potash twice daily

SORE TEATS are caused by scratches from briers, bites of insects, dirt exposure, also from the contagion of cow pox at milking. Remove cause and use milk tube if necessary, apply to sores after milking small quantity of mixture glycerine four ounces and carbolic acid one drachm In cow pox milk affected cow last and apply to sores mixture glycerine four ounces, water eight ounces, chloride of zinc twenty grains

WARTS on teats or other parts are generally easily removed by sharp scissors, dress wound as advised for sore teats.

MANGE causes great itching and generally starts at root of tail or top of neck, cause, a minute parasite Wash with soap and water and dry, after which apply lard which destroys the parasite

For LICE and TICKS apply daily a tea made by adding one pound quassia chips to three gallons of boiling water Ordinary sheep dip is also effective Carbolic acid is one of the most effective agents against parasites It should have a dilution of about one hundred times its bulk of water Kerosene emulsion is good for lice on cattle, killing both adults and eggs To make, dissolve one-half pound hard soap in one gallon hot water and while still near the boiling point add two gallons kerosene oil Churn or agitate until emulsified Use one part of this emulsion to eight or ten parts of water and use as a spray, wash or dip

In RINGWORM there are circular spots of baldness covered by gray or yellow crust, caused also by a parasite Wash with strong soap and water and apply pure creolin once daily for a week

FOUL CLAW or HOOF DISTEMPER causes lameness in one or more feet, swelling and heat around top of hoof, and bad smelling discharge around edge of hoof and between the claws Cause, dirty stables, standing in stagnant water or mud Trim off all loose horn, clean by wiping with dry rags, wet sores twice daily with mixture chloride of zinc one ounce, water one pint.

OVERGROWTH OF HOOF from standing in stable should be filed off with rasp

SPRAINS (generally below knee or hock), causing heat and lameness with tenderness at point of injury, should be bathed with warm water or with laudanum three parts, lead water one part

WOUNDS, if bleeding much, fill or cover the wound with clean cotton dipped in cold or quite warm water, and secure firmly with bandage, examine for foreign bodies as splinters, nails and dirt Do not fill wound with cobwebs to stop bleeding Remove the bandage before swelling takes place, one application of bandage usually enough Keep animal quiet first day, then allow exercise Keep wound clear and apply carbolic acid water 5 per cent or creolin and water 1 to 10 Do not apply grease to wounds If proud flesh forms apply daily enough powdered burnt alum to cover

For an ABSCESS or cavity containing pus caused by bruises etc open freely and syringe with 10 per cent creolin solution

LOCKJAW, a constant muscular spasm involving more or less the entire body is caused by the entrance of tetanus germs through a wound There is stiffness of whole or part of body more frequently the jaws making eating difficult or impossible If animal can drink give one-half ounce doses bromide potash five times daily dissolve and place on food or gruel or in water given to drink Do not drench, and keep quiet

INVERSION OF VAGINA most frequent in springers caused most frequently by stalls too low behind Treat displaced parts with warm water and replace them

Place cow in stall eight inches higher behind than in front until after calving

INVERSION OF WOMB occurs after calving, same cause as above and treatment the same; get womb placed well forward

STERILITY in bull is sometimes caused by high feeding and lack of exercise Give nux vomica one drachm and capsicum one-half drachm once daily In cow may be temporary, following abortion, if from other cause, seldom recover. Try same remedy as for bull

ABORTION is a frequent and troublesome malady, occurring generally at about seventh or eighth month Cause may be due to injuries or to contagion Separate at once when suspected, after calf is born syringe the womb with one gallon of warm water containing one ounce creolin. Repeat daily as long as any discharge is seen. Afterbirth should be removed about third day after calving Disinfect stables thoroughly. Do not let cow take bull for at least two months after aborting.

RETAINED AFTERBIRTH is generally due to premature birth, should be removed on third or fourth day Blanketing, warm stable, warm drinks may help If necessary to remove by hand, should only be attempted by qualified person, otherwise it is advisable to allow it to remain

INFLAMMATION OF THE WOMB is indicated by fever, loss of appetite, straining Caused by injuries in calving or to attempts at removal of afterbirth, and is generally fatal Give two drachms salicylate of soda every four hours and syringe womb with warm water and two ounces creolin to the gallon

MILK FEVER OR PARTURIENT APOPLEXY is usually treated by inflation of the udder with air Doubtless a regular "milk fever outfit," costing about $3, is best to use, as it precludes the possibility of infecting the sensitive interior of the udder But in emergency, or in case the outfit is not procurable, the udder may be inflated by using a bicycle or automobile air pump taking pains to be sure the air used is pure. If in a stable, ventilate it well

Attach a milking tube to the tubing of the pump, first dipping it in a carbolic solution (carbolic acid three teaspoons, water one pint). Wash each teat carefully with this antiseptic, before inflating it, so as to prevent infection Insert the milking tube carefully Work slowly

Of course the udder must not be inflated unreasonably After inflation, remove the tube and leave the udder full of air for five to eight hours Then the air may be worked out gently, and, if necessary, the inflation may be repeated

Cows so treated usually show marked signs of improvement within two hours

ACTINOMYCOSIS (LUMP JAW) is a contagious disease due to a germ known as "Ray fungus" There are well-defined swellings about the jaw, head and throat, or may be on the tongue or in the lungs These soften and open after a time and discharge matter; appetite good until well advanced The treatment is, remove by surgical means, late experiments indicate iodide of potash two to three drachms daily to be a cure Advanced cases should be killed at once The meat should never be used for food

MILK SICKNESS (TREMBLES) is a disease of cattle communicable to man and other animals by use of meat or milk, dry cattle most commonly and far more severely affected Milch cows may transmit this disease through the use of their milk and yet show no trace of the disease themselves. The symptoms are trembling upon least exertion as walking, great prostration and delirium Treatment is only prevention, do not use pastures known to produce this disease, unbroken land of certain districts unsafe

RHEUMATISM is shown by hot, painful swellings at the joints, generally the hocks, stiffness in walking or may be unable to rise Bathe joints with camphor and alcohol and give internally two drachms salicylate of soda every three hours until four ounces have been given, keep warm and dry and give laxative food

TEXAS FEVER, a disease of Southern cattle which, when transmitted to Northern cattle, is generally fatal in a few days The spread of the disease is generally due to ticks; those from diseased animals contain the germs of the disease and by their bites transmit it The indications are a high fever, staggering gait, urine of reddish brown to black, great prostration, unconsciousness, death Most common in summer months; unknown in the north after heavy frost Prevention, avoidance of cattle from Southern fever districts, dipping of Southern cattle to destroy the ticks.

SHELBY COUNTY

ABBREVIATIONS.—a, means acres; bds, boards; B tel, Bell telephone; 4 ch, 4 children; H&L, house and lot; Wash 10, Washington Township Road No. 10; O, owns; R1, Rural Route No. 1; ret, retired; T, tenant; 4h, 4 horses; 2c, 2 cattle.

The abbreviations used for the Townships of Shelby County are as follows:—

Addison, Add.	Liberty, Lib.	Sugar Creek, Sr. Ck.
Brandywine, Brywn.	Marion, Mar.	Union, Un.
Hanover, Han.	Moral, Moral.	Van Buren, Vn. Bn.
Hendricks, Hend.	Noble, Nob.	Washington, Wash.
Jackson, Jack.	Shelby, Shel.	

Names in CAPITALS are those of Farm Journal subscribers—always the most intelligent and progressive people in any county. No Tumbledowns, for no farmer can keep on reading the F. J. and being a Tumbledown, too. Many have tried, but all have to quit one or the other.

Poultry Diseases and Enemies

(From the Biggle Poultry Book)

Many of the ills that poultry flesh is heir to are directly traceable to bad breeding and treatment. In-and-in-breeding is practiced and the law of the survival of the fittest is disregarded until the stock becomes weak and a prey to disease.

Yards and runs occupied for any considerable time become covered with excreta and a breeding ground for all manner of disease germs.

Dampness from leaky roofs or from wet earth floors, and draughts from side cracks, or from overhead ventilation slay their thousands yearly.

A one-sided diet of grain, especially corn, moldy grain or meal, decayed meat or vegetables, filthy water, or the lack of gritty material are fruitful sources of sickness.

In the treatment of sick birds much depends on the nursing and care. It is useless to give medicine unless some honest attempt be made to remove the causes that produce the disturbance. Unless removed the cause will continue to operate and the treatment must be repeated.

It is an excellent plan to have a coop in some secluded place to be used exclusively as a hospital. If cases cannot be promptly treated it is better to use the hatchet at once and bury deeply, or burn the carcasses. This is the proper plan in every case where birds become very ill before they are discovered.

Sick birds should in no case be allowed to run with the flock and to eat and drink with them.

In giving the following remedies we make no pretence to a scientific handling of the subject.

Fevers, from colds, fighting of cocks, etc. Symptoms: unusual heat of body, red face, watery eyes and watery discharge from nostrils.

Give dessertspoonful citrate of magnesia and, as a drink, ten drops of nitre in half a pint of water.

Apoplexy and Vertigo, from overfeeding or fright. Symptoms: unsteady motion of the head, running around, loss of control of limbs. Give a purgative and bleed from the large veins under wing.

Paralysis, from highly seasoned food and over stimulating diet. Symptoms: inability to use the limbs, birds lie helpless on their side. Treatment—The same as for apoplexy.

Leg Weakness occurs in fast-growing young birds, mostly among cockerels. A fowl having this weakness will show it by squatting on the ground frequently and by a tottering walk. When not hereditary it usually arises from a diet that contains too much fat and too little flesh and bone-making material, such as bread, rice, corn and potatoes. To this should be added cut green bone, oats, shorts, bran and clover, green or dry. Give a tonic pill three times a day made of sulphate of iron, 1 grain; strychnine, 1 grain; phosphate of lime, 16 grains; sulphate of quinine, ½ grain. Make into thirty pills.

Canker of the Mouth and Head.—The sores characteristic of this disease are covered with a yellow cheesy matter which, when it is removed, reveals the raw flesh. Canker will rapidly spread through a flock, as the exudation from the sores is a virulent poison, and well birds are contaminated through the soft feed and drinking water. Sick birds should be separated from the flock and all water and feed vessels disinfected by scalding or coating with lime wash. Apply to sores with a small pippet syringe or dropper the peroxide of hydrogen. When the entire surface is more or less affected, use a sprayer. Where there is much of the cheesy matter formed, first remove it with a large quill before using the peroxide. A simple remedy is an application to the raw flesh of powdered alum, scorched until slightly brown.

Scaly Leg, caused by a microscopic insect burrowing beneath the natural scales of the shank. At first the shanks appear dry, and a fine scale like dandruff forms. Soon the natural scale disappears and gives place to a hard, white scurf. The disease passes from one fowl to another through the medium of nests and perches, and the mother-hen infecting her brood. To prevent its spread, coat perches with kerosene and burn old nesting material and never use sitting hens affected by the disease. To cure, mix ½ ounce flowers of sulphur, ¼ ounce carbolic acid crystals and stir these into 1 pound of melted lard. Apply with an old tooth brush, rubbing in well. Make applications at intervals of a week.

Worms in the intestines of fowls indicate disturbed digestion. Loss of appetite and lack of thrift are signs of their presence. Give santonin in 2-grain doses

six hours apart. A few hours after the second dose give a dessertspoonful of castor oil. Or, put 15 drops of spirits of turpentine in a pint of water and moisten the feed with it.

BUMBLE-FOOT, caused by a bruise in flying down from perches or in some similar manner. A small corn appears on the bottom of the foot, which swells and ulcerates and fills with hard, cheesy pus. With a sharp knife make a cross cut and carefully remove all the pus. Wash the cavity with warm water, dip the foot in a solution of one-fourth ounce sulphate of copper to a quart of water and bind up with a rag and place the bird on a bed of dry straw. Before putting on the bandage anoint the wound with the ointment recommended for scaly leg or coat it with iodine.

GAPES, caused by the gape-worm, a parasite that attaches itself to the windpipe, filling it up and causing the bird to gasp for breath. The worm is about three-fourths of an inch long, smooth and red in color. It appears to be forked at one end, but in reality each parasite is two worms, a male and female, firmly joined together. This parasite breeds in the common earth worm. Chicks over three months old are seldom affected. If kept off of the ground for two months after hatching, or on perfectly dry soil, or on land where affected chicks have never run, chicks will seldom suffer from the gapes. Old runs and infested soil should have frequent dressings of lime.

In severe cases the worms should be removed. To do this put a few drops of kerosene in a teaspoonful of sweet oil. Strip a soft wing feather of its web to within an inch of the tip, dip in the oil, insert feather in windpipe, twirl and withdraw. Very likely some of the parasites and mucus will come with it. The rest will be loosened or killed, and eventually thrown out. It may be necessary to repeat the operation.

To kill the worm in its lodgment, gum camphor in the drinking water or pellets of it as large as a pea forced down the throat is recommended. Turpentine in the soft feed, as advised in the treatment for worms in the intestines, is said to be effective. Pinching the windpipe with the thumb and finger will sometimes loosen the parasite.

When broods are quartered on soil known to be infested, air-slacked lime should be dusted on the floor of the coop, and every other night, for two or three weeks, a little of the same should be dusted in the coop over the [illegible] her brood. To apply, [illegible] lows and only a little each [illegible]

CHOLERA is due to a [illegible] virus, and must not be [illegible] common diarrhoea [illegible] digestion is arrested, [illegible] full, there is fever and [illegible] bird drinks, but ref[illegible] to be in distress. [illegible] of the blood, which [illegible] the purple color of the [illegible] charges from the [illegible] urates, which in [illegible] yellowish, deep yellow, [illegible] stages, a greenish-yellow. [illegible] grows more severe as the [illegible] gresses. A fowl generally [illegible] two days. The virus of [illegible] diffusible in the air, but remains [illegible] soil, which becomes infected [illegible] discharges, and in the body of [illegible] the victims. It may be carried [illegible] place to place on the feet of other [illegible] or animals. Soil may be disinfected [illegible] saturating it with a weak solution [illegible] phuric acid in water. Remove [illegible] all well birds to new and clean [illegible] and wring the necks of all sick [illegible] burn their carcasses and destroy [illegible] quarters.

For cases not too far gone [illegible] give sugar of lead, pulverized [illegible] gum camphor, of each, 60 grains; [illegible] dered capsicum (or fluid extract of [illegible] sicum is better, 10 drops). Make [illegible] Dissolve the camphor in just enough [illegible] cohol that will do so without making [illegible] fluid, then rub up the other ingredients [illegible] in the same bolus, mix with [illegible] meal dough, enough to make the [illegible] mass, then roll it and divide [illegible] into one hundred and twenty pills; [illegible] one to three pills a day for grown [illegible] or turkey, less to the smaller fowls. [illegible] birds that are well enough to eat [illegible] have sufficient powdered charcoal [illegible] their soft feed every other day to [illegible] it slightly, and for every two to [illegible] five drops of carbolic acid in the [illegible] water with which the feed is mixed.

ROUP.—The first symptoms [illegible] of a cold in the head. [illegible] watery discharge from the nostrils [illegible] eyes thickens and fills the [illegible] and throat, the head swells and [illegible] close up and bulge out. The breath of affected fowls is very offensive. [illegible] contagious by diffusion through the air, by contact with the [illegible] sick fowls. To disinfect [illegible] coops burn sulphur and carbolize [illegible]

them after turning the fowls out and keep closed for an hour or two. Pour a gill of turpentine and a gill of carbolic acid over a peck of lime and let it become slaked, then scatter freely over the interior of houses and coops and about the yards.

For the first stages spray the affected flock while on the roost or in the coop with a mixture of two tablespoonfuls of carbolic acid and a piece of fine salt as big as a walnut in a pint of water. Repeat two or three times a week. Or, if a dry powder is preferred, mix equal parts of sulphur, alum and magnesia and dust this in their nostrils, eyes and throat with a small powder gun. The nasal cavities should be kept open by injecting with a glass syringe or sewing machine oil-can a drop or two of crude petroleum. A little should be introduced also through the slit in the roof of the mouth. Give sick birds a dessertspoonful of castor oil two nights in succession, and feed soft food of bran and corn meal seasoned with red pepper and powdered charcoal. A physician advises the following treatment: hydrastin, 10 grains; sulph. quinine, 10 grains; capsicum, 20 grains. Mixed in a mass with balsam copaiba and made into twenty pills; give one pill morning and night; keep the bird warm and inject a saturated solution of chlorate potash in nostrils and about 20 drops down the throat.

Pip, so-called, is not a disease but only a symptom. The drying and hardening of the end of the tongue in what is called "pip" is due to breathing through the mouth, which the bird is compelled to do because of the stoppage of the nostrils. By freeing the natural air passages the tongue will resume its normal condition.

Diphtheria is a contagious disease. The first symptoms are those of a common cold and catarrh. The head becomes red and there are signs of fever, then the throat fills up with thick, white mucus and white ulcers appear. The bird looks anxious and stretches its neck and gasps. When it attacks young chicks it is frequently mistaken for gapes. When diphtheria prevails, impregnate the drinking water with camphor, a teaspoonful of the spirits to a gallon of water, and fumigate the house as recommended for roup.

Spray the throat with peroxide of hydrogen or with this formula: 1 ounce glycerine, 5 drops nitric acid, 1 gill water. To treat several birds at once with medicated vapor, take a long box with the lid off, make a partition across and near to one end and cover the bottom with coal ashes. Mix a tablespoonful each of pine tar, turpentine and sulphur, to which add a few drops, or a few crystals, of carbolic acid and a pinch of gum camphor. Heat a brick very hot, put the fowls in the large part and the brick in the other, drop a spoonful of the mixture on the brick and cover lightly to keep the fumes in among the patients. Watch carefully, as one or two minutes may be all they can endure. Repeat in six hours if required.

Crop-Bound.—The crop becomes much distended and hard from obstruction of the passage from the crop to the gizzard by something swallowed; generally, it is long, dried grass, a bit of rag or rope. Relief may sometimes be afforded by giving a tablespoonful of sweet oil and then gently kneading the crop with the hand. Give no food, except a little milk, until the crop is emptied. Wet a tablespoonful or more of pulverized charcoal with the milk and force it down the throat. Should the crop not empty itself naturally pluck a few feathers from the upper right side of it and with a sharp knife make a cut about an inch long in the outer skin. Draw this skin a little to one side and cut open the crop. Remove its contents, being careful not to miss the obstruction. Have a needle threaded with white silk ready, and take a stitch or two in the crop skin first, then sew up the outer skin separately. Put the patient in a comfortable coop, and feed sparingly for a week on bran and meal in a moist state, and give but little water.

Soft or Swelled-Crop arises from lack of grit, or from eating soggy and unwholesome food. The distended crop contains water and gas, the bird is feverish and drinks a great deal. By holding it up with its head down the crop will usually empty itself. When this is done give teaspoon doses of charcoal slightly moistened twice at intervals of six hours. Restrict the supply of water and feed chopped onions and soft feed in moderation.

Egg-Bound, Diseases of the Oviduct. Overfat hens are often troubled in this way. Forcing hens for egg production will sometimes break down the laying machinery. Give green food, oats, little corn, and no stimulating condiments. Let the diet be plain and cooling in its

nature. To relieve hens of eggs broken in the oviduct, anoint the forefinger with sweet oil and deftly insert and draw out the broken parts. When the hen is very fat and the egg is so large it cannot be expelled, the only way to save the hen is to break the egg and remove it as above directed.

WHITE-COMB OR SCURVY, caused by crowded and filthy quarters and lack of green food. The comb is covered with a white scurf. This condition sometimes extends over the head and down the neck, causing the feathers to fall off.

Change the quarters and diet, give a dose of castor oil and follow this with a half a teaspoonful of sulphur in the soft food daily.

RHEUMATISM AND CRAMP caused by cold and dampness. Chicks reared on bottom-heat brooders are particularly subject to these troubles. Damp earth floors and cement floors in poultry houses produce it in older birds.

Give dry and comfortable quarters, feed little meat, plenty of green food, and soft feed seasoned with red pepper.

DIARRHŒA of chicks with clogging of the vent. Remove the hardened excre-

tion and [illegible]

FARMERS' BULLETINS

Sent Free to Residents of the United States, by Department of Agriculture Washington, D. C., on Application.

NOTE.—Some numbers omitted are no longer published. Bulletins in this list will be sent free, so long as the supply lasts, to any resident of the United States, on application to his *Senator, Representative, or Delegate in Congress*, or to the Secretary of Agriculture, Washington, D. C. Because of the limited supply, applicants are urged to select only a few numbers, choosing those which are of special interest to them. Residents of foreign countries should apply to the Superintendent of Documents, Government Printing Office, Washington, D. C., who has these bulletins for sale. Price, 5 cents each to Canada, Cuba, and Mexico; 6 cents to other foreign countries.

Handy Things to Know

A rod is 16½ feet, or 5½ yards.
A mile is 320 rods
A mile is 1,760 yards
A mile is 5,280 feet
A square foot is 144 square inches
A square yard contains 9 square feet
A square rod is 272¼ square feet
An acre contains 43,560 square feet
An acre contains 4,840 square yards
An acre contains 160 square rods
A quarter section contains 160 acres.
An acre is 8 rods wide by 20 rods long
An acre is 10 rods wide by 16 rods long
An acre is about 208¾ feet square.
A solid foot contains 1,728 solid inches
A pint (of water) weighs 1 pound
A solid foot of water weighs 62½ pounds
A gallon (of water) holds 231 solid inches
A gallon of milk weighs 8 pounds and 10 ounces
A barrel of flour weighs 196 pounds
A barrel of salt weighs 280 pounds
A barrel of beef weighs 200 pounds
A barrel of pork weighs 200 pounds
A barrel of fish weighs 200 pounds
A keg of powder equals 25 pounds
A stone of lead or iron equals 14 pounds
A pig of lead or iron equals 21½ stone
Anthracite coal broken—cubic foot—averages 54 pounds
A ton loose occupies 40-43 cubic feet
Bituminous coal broken—cubic foot—averages 49 pounds
Cement (hydraulic) Rosendale, weight per bushel, 70 pounds
A ton loose occupies 40-48 cubic feet
Cement (hydraulic) Louisville, weight per bushel, 62 pounds
Cement (hydraulic) Portland, weight per bushel, 96 pounds
Gypsum ground, weight per bushel, 70 pounds
Lime, loose, weight per bushel, 70 pounds
Lime, well shaken, weight per bushel, 80 pounds
Sand at 98 pounds per cubic foot, per bushel, 122½ pounds
1829 bushels equal a ton 1,181 tons cubic yard

Measuring Hay and Corn

Hay is often sold in the mow or stack where the weight has to be estimated For this purpose 400 cubic feet of hay is considered a ton The actual weight of 400 cubic feet of hay will vary according to the quality of the hay, time of cutting, position in mow, etc For making an estimate in a given case multiply together the length, breadth and height of the mow or stack in feet and divide the product by 400 The quotient will be the number of tons

Corn is measured by the following rule A heaped bushel contains 2,748 cubic inches. To find the number of bushels of corn in a crib it is therefore necessary merely to multiply together the length, width and height in inches and divide the product by 2,748 The number of bushels of shelled corn will be two-thirds of the quotient If the sides of the crib are slanting, it will be necessary to multiply together one-half the sum of the top and bottom widths with the height and length

The legal weight of a bushel of shelled corn in Pennsylvania, New Jersey, Maryland and Virginia is 56 pounds

In Pennsylvania, Virginia and Maryland 32 pounds constitute a bushel of oats, in New Jersey, 30 pounds

A bushel of wheat is placed at 60 pounds by most of the states of the Union

Pennsylvania recognizes 56 pounds as a bushel of white potatoes In Maryland, New Jersey and Virginia the legal weight is 60 pounds

A bushel of clover seed in Pennsylvania must weigh 60 pounds, in Maryland, 60 pounds, in New Jersey, 64 pounds; in Virginia, 60 pounds

A bushel of timothy seed in Pennsylvania must weigh 45 pounds, and the same weight in most adjacent states

To estimate the amount of land in different fields under cultivation use the following table

5	yards	wide by	968	yards	long, 1 acre
10	yards	wide by	484	yards	long, 1 acre
20	yards	wide by	242	yards	long, 1 acre
40	yards	wide by	121	yards	long, 1 acre
70	yards	wide by	69 1/7	yards	long, 1 acre
80	yards	wide by	60½	yards	long, 1 acre
60	feet	wide by	726	feet	long, 1 acre
110	feet	wide by	396	feet	long, 1 acre
120	feet	wide by	363	feet	long, 1 acre
220	feet	wide by	198	feet	long, 1 acre
240	feet	wide by	181¼	feet	long, 1 acre
440	feet	wide by	99	feet	long, 1 acre

Seed Per Acre

It requires less seed per acre to sow in hills or rows than to sow broadcast The hill or row system permits of after cultivation, which is not possible with a broadcasted crop In all calculations for hill and drills it must be remembered that an acre of land contains 43,560 square feet A square piece of land, 209 feet on a side, contains about an acre The following figures are merely suggestive, as practice varies with locality

ALFALFA, 25 to 30 lbs, broadcast
ASPARAGUS, 4 to 5 lbs. in drills, 1 oz to 50 feet of row
BARLEY, 1½ to 2 bushels drilled, 2 to 2½ bushels broadcast
BEANS, bush, 1½ bushels in drills
BEANS, pole, 10 to 12 qts, in hills.
BEETS, 5 to 6 lbs, in drills
BUCKWHEAT, 1 bushel, broadcast
CABBAGE, ¼ lb in seed bed, to be transplanted
CARROT, 3 to 4 lbs, in drills
CELERY, about 1 oz for 2,000 plants, 1 lb per acre
CLOVER, red, 8 to 10 lbs, broadcast
CLOVER, crimson, 15 lbs, broadcast
CLOVER, white, 6 lbs, broadcast
CORN, field and sweet, 8 to 10 qts
CORN, ensilage, 12 qts, in drills
COW PEAS, 1 bushel, in drills, 1½ bushels, broadcast
CUCUMBERS, 2 lbs, in drills
EGG PLANT, 1 oz seed for 1,000 plants ¼ lb to the acre
GRASS, lawn, 2 to 4 lbs, broadcast
LETTUCE, 1 oz of seed to 1,000 plants, ½ lb to the acre
MELON, musk, 2 to 3 lbs, in hills.
MELON, water, 4 to 5 lbs, in hills.
MILLET, 1 bushel, broadcast
OATS, 3 bushels broadcast
ONIONS, 5 to 6 lbs, in drills, for sets 30 to 50 lbs, in drills
PARSNIPS, 4 to 6 lbs, in drills
PEAS, 1 to 2 bushels, in drills
POTATOES (cut) 8 to 10 bushels
PUMPKINS, 4 to 5 lbs, in hills
RADISHES, 8 to 10 lbs, in drills
RYE, ¾ to 1½ bushels, in drills
SPINACH, 10 to 12 lbs, in drills, running sorts, 3 to 4 lbs
SQUASH, bush, 4 to 6 lbs, in hills
TIMOTHY, 15 to 20 lbs, broadcast, if used alone, less if sown with other grasses
TOMATOES, ⅛ lb in seed bed, to be transplanted
TURNIPS, 1 to 2 lbs, in drills, 2 to 3 lbs, broadcast
WHEAT, 1½ bushels, broadcast

Suitable Distance for Planting Trees

Apples—Standard	25 to 35 feet apart each way					
Apples—Dwarf (bushes)	10	"	"	"	"	
Pears—Standard	10 to 20	"	"	"	"	
Pears—Dwarf	10	"	"		"	
Cherries—Standard	18 to 20	"	"	"	"	
Cherries—Dukes and Morrellos	16 to 18	"	"	"	"	
Plums—Standard	16 to 20	"	"		"	
Peaches	16 to 18	"	"		"	
Apricots	16 to 18	"	"	"	"	
Nectarines	16 to 18	"	"		"

Grapes	8 to 12	"	"			

Shingles Required in a Roof

Double the rafters and multiply by length of building Multiply this by 9 if exposed 4 inches, by 8 if exposed 4½ inches, and by 7 1/5 if exposed 5 inches to the weather

One thousand shingles, laid 4 inches to the weather, will cover 100 square feet of surface

Eight hundred shingles, 5 inches to the weather, will cover 100 square feet

One thousand shingles require 5 pounds of four-penny nails

Five to ten per cent should be allowed to these figures to cover waste and shortage

One thousand laths will cover 70 yards of surface and take 11 pounds of nails

Two hundred and fifty pickets will make 100 lineal feet of fence

Nails Required

For 1,000 shingles 3½ to 5 pounds 4d, or 3 to 3½ pounds 3d

For 1 000 laths about 7 pounds 3d fine or 8 pounds 2d fine

For 1,000 feet clapboards (siding) about 18 pounds 6d box

For 1 000 feet covering boards about 20 pounds 8d common, or 25 pounds 10d

Nails—Common

Size	3d	4d	6d	8d	10d	12d
Length	1½	1½	2	2½	3	3½
No to lb	500	300	165	90	62	45
Size	16d	20d	30d	40d	50d	60d
Length	3½	4	4½	5	5½	6
No to lb	35	24	18	13	10	8

Eighteen to twenty-five pounds of nails are required per 1 000 feet of lumber

Grease a nail and it won't split wood

Concrete

Concrete is made by mixing together Portland cement, sand and stone (or gravel). Various proportions of each are used, depending upon the use to which the concrete is put. About half an hour after mixing these materials together, the mass begins to stiffen, until, in from half a day to a day, it becomes so hard that you cannot dent it with the hand. By a month the mass is hard as stone—indeed, harder than most stones. The best way to buy cement is in cloth sacks. Manufacturers charge more for cement in cloth sacks, but allow a rebate for the return of the empty sacks. A bag of cement weighs 95 pounds, and four such bags make a barrel of 380 pounds.

It is important that your stock of cement be kept in a dry place. Once wet, it becomes hard and lumpy, and in such condition is useless. If, however, the lumps are caused by pressure in the storehouse, the cement may be used with safety. Lumps thus formed can be easily broken by a blow from the back of a shovel.

In storing cement, throw wooden blocks on the floor. Place boards over them and pile the cement on the boards, covering the pile with a canvas or a piece of roofing paper. Never, under any circumstances, keep cement on the bare ground, or pile it directly against the outside walls of the building.

Do not use very fine sand. If there is a large quantity of fine sand handy, obtain a coarse sand and mix the two sands together in equal parts; this mixture is as good as coarse sand alone.

Sometimes fine sand must be used, because no other can be obtained; but in such an event an additional amount of cement must be used—sometimes as much as double the amount ordinarily required. For example, in such a case, instead of using a concrete 1 part cement, 2¼ parts sand and 5 parts stone, use a concrete 1 part cement, 1¼ parts sand and 2½ parts stone.

Besides being coarse, the sand should be clean. The presence of dirt in the sand is easily ascertained by rubbing a little in the palm of the hand. If a little is emptied into a pail of water, the presence of dirt will be shown by the discoloration of the water. This can be discovered also by filling a fruit jar to the depth of 4 inches with sand and then adding water until it is within an inch of the top. After the jar has been well shaken, the contents should be allowed to settle for a couple of hours. The sand will sink to the bottom, but the mud, which can be easily recognized by its color, will form a distinct layer on top of the sand, and above both will be a clear depth of water. If the layer of mud is more than one-half inch in thickness, the sand should not be used unless it is first washed.

To wash sand build a loose board platform from 10 to 15 feet long, with one end a foot higher than the other. On the lower end and on the sides nail a board 2 by 6 inches on edge to hold the sand. Spread the sand over this platform in a layer three or four inches thick, and wash it with a hose. The washing should be started at the high end and the water allowed to run through the sand and over the 2-by-6-inch piece at the bottom. A small quantity of clay or loam does not injure the sand, but any amount over 5 per cent. does.

Great care should be used in the selection of the stone or gravel. The pebbles should be closely inspected to see that there is no clay on their surface. A layer of such clay prevents the "binding" of the cement. If necessary, stone or gravel may be washed in the same way as above described for sand. Dust may be left in the crushed stone without fear of its interfering with the strength of the cement, but care should be taken to see that such dust is distributed evenly through the whole mass, and when dust is found in stone, slightly less sand should be used than ordinarily. As to the size of stone or gravel, this must be determined by the form of construction contemplated. For foundations or any large thick structure, use anything from ½ to 2½ inches in diameter. For thin walls use ¼ to 1-inch stone. The best results are obtained by the use of a mixture of sizes graded from small to large. By this means the spaces between the stones or pebbles are reduced and a more compact concrete is obtained. Moreover, this method makes it possible to get along with less sand and less cement.

Water for concrete should be clean and free from strong acids and alkalies. It may be readily stored in a barrel
